

## TERMS & CONDITIONS- POWERPOINT INSTALLATION

Thank you for the opportunity to quote on your gas heater / hot water service installation.

Detailed in the quote is the option to install an electrical power point required to run the appliance.

If you choose to accept this, we would like to advise that the installation will be scheduled direct through Adelaide Hills Gas and electrical works will be carried out by local electrician Tom from SA Pulse.

Please note that works carried out to install a power point for the quoted cost will be performed under the following conditions.

- The quoted **\$325.00 including GST** for the power point installation means a standard single power point will be fitted in a practical location as close to the appliance as possible, to be directed by our gas fitter. If you would prefer a double power point please let us know at time of accepting this quote. The price for a double power point will be \$345.00
- If we are required to disconnect an old electric storage Hot Water Service, an additional **\$50.00 may apply**. This allows for the electrician to either re fit in line with the new unit or install a junction box outside / in the roof, along with disconnecting the circuit braker in the switchboard. Checking other earths requirements etc.
- A Safety switch must already be on site, these are a mandatory requirement for all homes. If you do not have one or the current one is faulty it will need replacing to make the installation compliant. For compliance, a working safety switch will need to be installed, cost for this will be an additional \$280.00 including GST.  
<https://www.sa.gov.au/topics/energy-and-environment/using-electricity-and-gas-safely/safety-switches#:~:text=By%20law%2C%20safety%20switches%20protecting,circuits%20are%20altered%20or%20added.&text=Safety%20switches%20are%20also%20required,similar%20accommodation%20in%20caravan%20parks.>
- If there is no power detected within 10 meters of where the power point needs to be positioned, this may incur additional charges. As you can understand it would require additional labour and parts. If you believe this will be the case for your installation, please bring it to our attention to allow us to give you a more accurate quote for the electrical works required.

Please don't hesitate to contact the office if you have any further queries.

We look forward to working with you.
